Excel melding bestandsformaat uitschakelen
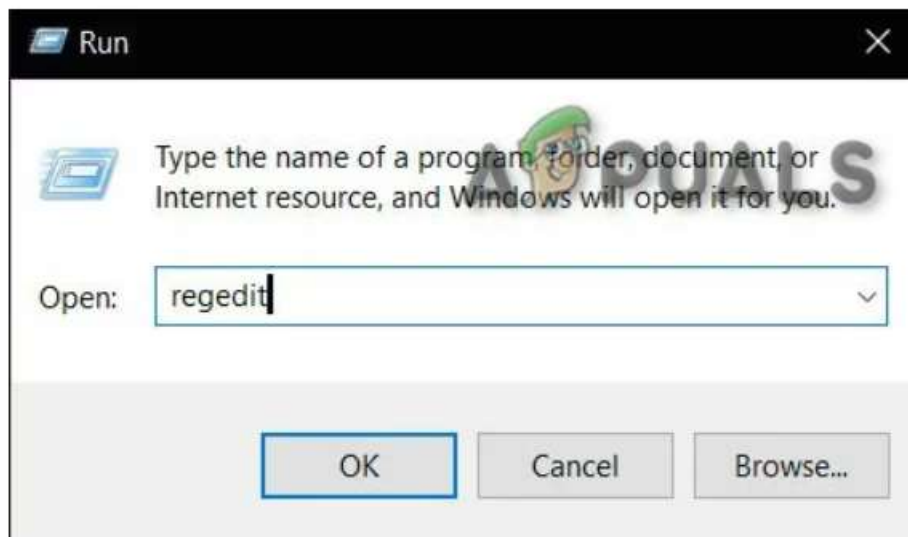

Bron: https://appuals.com/file-format-and-extension-dont-match/#:~:text=If%20you%20see%20the%20

Here's a quick guide on suppressing the **File Format and Extension of Don't Match** error message by using **Registry Editor**:

1. Press **Windows key + R** to open up a **Run** dialog box. Once you're inside the Run box, type **'regedit'** and press **Enter** to open up **Registry Editor**. When you're prompted by the **UAC (User Account Control)**, click **Yes** to grant administrative privileges

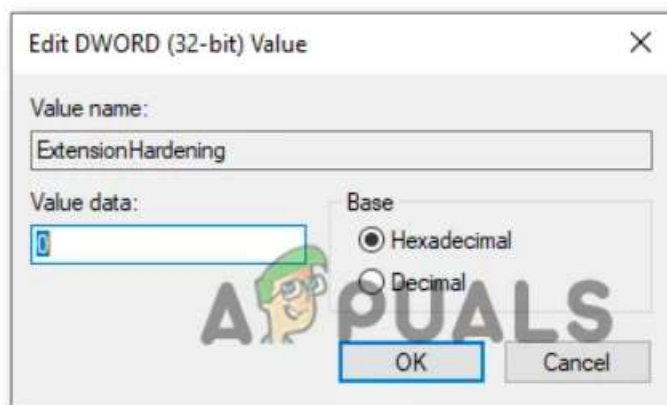

Regedit Command

2. Once you're inside the Registry Editor utility, use the right-hand pane to navigate to the following location:

```
HKEY_CURRENT_USER\Software\Microsoft\Office\*X*\Excel\Security
```
   Note: You can also paste the location directly in the navigation bar and press there to get there instantly. Also, keep in mind the X is simply a placeholder – Replace it with the current version of your Office installation.

3. After you manage to get to the correct location, move over to the right-hand pane, then right-click on an empty space and select **NEW > Dword (32-bit) value**.

Creating the ExtensionHardening value

4. After the new **Dword** value has been created, name
   it **ExtensionHardening.** Then, double-click on it and set
   the **Base** to **Hexadecimal** and the value to 0 before clicking on.

Creating the ExtensionHardening value

5. Once the change has been made, close the **Registry Editor** and restart your
   computer. At the next system startup, you should no longer encounter the same
   error message.
